

CGG Corrugated Heat Exchanger Gasket

Product Information Bulletin

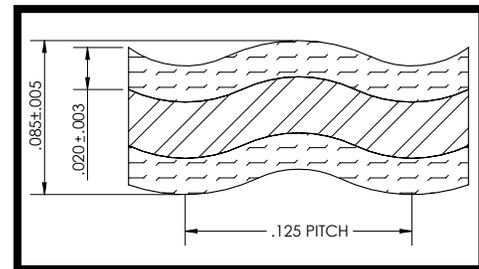

SOLUTION FOR: Heat Exchanger Applications

Installed in thousands of heat exchangers world-wide, Advanced Sealing's corrugated CGG™ gasket has a proven track record of excellent sealability and reliability in difficult applications. The CGG™ gasket is manufactured with a corrugated stainless steel core and faced with graphite, mica, or PTFE. It can be supplied with any rib configuration, metallurgy and facing material to suit most applications.

FEATURES:

- Provides a high level of sealability even under severe operating conditions and in critical applications
- Provides an excellent seal in applications that experience excessive movement due to thermal expansion (i.e. Heat Exchangers)
- Premium oxidation resistant Sigraflex APX2, LeaderTherm NXT 1010, or PTFE.
- Low gasket relaxation helps maintain high bolt loads in exchanger applications
- 304L or 316L stainless steel core or other customer specified material.

- Excellent recovery characteristics in cycling applications
- Wide temperature range from cryogenic to 1800 °F depending on application, facing and core material
- Wide pressure range from vacuum to 3000 PSI depending on application, facing and core material
- Seals at low seating stress which makes it ideal for a wide variety of flange types
- Conforms and seals imperfections in flange surfaces
- Proven corrugation pattern resists crushing even under extreme seating loads
- The preferred exchanger gasket when the radial width is 1/2" or greater
